

Two layers of overpressure protection? You can't afford not to.

FISHER™

Protecting your gas distribution systems is paramount. While a single level of overpressure protection is required for a North American gas distribution operator, a 2 level protection approach is gaining importance for the reassurance that your customers and assets are completely protected.

Customer Overpressure Protection

To meet unique customer requirements Emerson has designed solutions with the following options for overpressure protection:

- Next generation in True-Monitor™ Protection
- Enhanced slam-shut capability
- Improved internal relief valve
- The evolution of Secondary Seat™ Protection combined with internal relief

Engineered with robustness and safety in mind the Commercial Service Regulator family is a unique modular design offering:

- Easy product sizing and selection
- Broad platform, wide application coverage
- Reduced inventory through shared parts
- Reduced training and maintenance through streamlined design

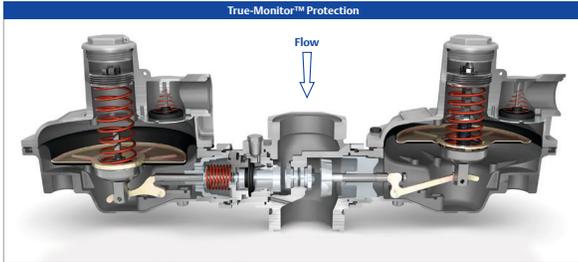

EMERSON. CONSIDER IT SOLVED.™

Customized safety options to match your unique requirements

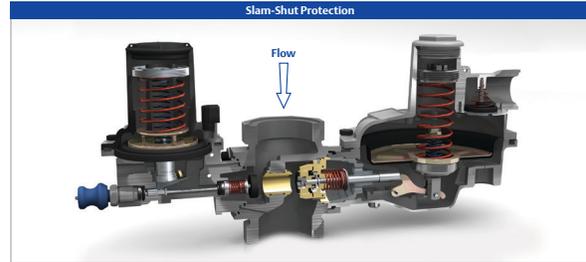

True-Monitor™ Protection

- Combines the operation of a conventional two regulator wide-open monitor set into one body.
- Multiple body sizes to fit new and replacement applications. Will still protect the system in the event of a lever disconnect of one device.

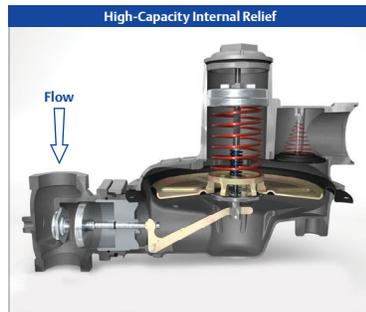

Slam-Shut Capability

- Discontinues gas service by shutting the gas off if there is an overpressure or underpressure condition.
- Reduced training and maintenance through streamlined design.

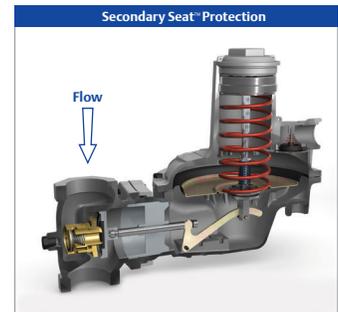

Internal Relief

- Full capacity internal relief supplements any secondary overpressure protection devices.
- Balanced or Unbalanced trims.

Secondary Seat™ Protection

- Provides overpressure protection in case of lockup failure of the primary orifice and seat.
- External, internal or dual-registration for flexible skid and field installation.
