FieldQ “Fully Integrated” Actuator and Control Modules

General Overview

Description

The FieldQ package consists of an actuator with a module for control and position feed back and forms an integrated concept for “On/Off” valve automation.

1. Basic Actuators

The basic actuator supplies the torque, required to open and close valves and is available in various sizes, rated 413 to 15312 lbf.in at 80 psig (47 to 1725 Nm at 5.5 barg). Double-Acting and Spring-Return executions are available. The Spring-Return execution can be equipped with multiple spring sets to cover a pressure range from 30 to 120 psig (2 to 8 barg).

2. Control Modules

The Control Modules contain, next to the components for feedback switches, also all the pneumatic control components.

Its compact and robust construction incorporates basic control and feedback functionality and is suitable for indoor and outdoor use.

1. The enclosure of the control modules are rated IP66 / NEMA 4X according IEC 60529 and are suitable for indoor and outdoor use.
2. The QC41, QC42 and QC43 Explosion proof control modules are suitable for use in potentially explosive atmospheres and are available with FM, CSA, ATEX or IECEx approvals
3. The QC40 with AS-Interface bus communication is available with Non-Sparking Ex nA or Non Incendive approvals and is suitable for use in potentially explosive atmospheres. For this QC40 ASI module FM, ATEX or IECEx approvals are available.
4. The QC54 with Foundation Fieldbus bus communication is available with Non-Sparking Ex nA or Non Incendive or Intrinsically Safe approvals and is suitable for use in potentially explosive atmospheres. For this QC54 ASI module FM, ATEX or IECEx approvals are available.
5. Both the weatherproof and certified control modules are available with the Fail-In-Last-Position control function for Double-Acting actuators and the nonintrusive switch point adjustment.

FieldQ valve actuator with Control Module

1. Basic Actuator
2. Control Module
3. Limit stop screws for “Open” and “Closed” position
4. G1/4” air connections
5. Optional: Built-in speed control
6. Visual position indication
7. Optional: Manual Control
8. Electrical entries

Actuator Specifications:

Torque Range

- Double-Acting: 413 to 15312 lbf.in at 80 psig (47 to 1725 Nm at 5.5 barg)
- Spring-Return: 220 to 6844 lbf.in (25 to 773 Nm) spring end torque at maximum spring set.

Pressure Range

- Double-Acting:
 - 2.9 to 120 psig (0.2 to 8.3 barg)
- Spring-Return:
 - 87 to 120 psig (6 to 8.3 barg), with maximum spring set
 - 43.5 to 120 psig (3 to 8.3 barg), reduced spring quantity

Pressure Media

- Air, dry or lubricated and inert gases
- Dew point at least 10K below ambient temperature
- For sub-zero applications, take appropriate measures
- Mentioned pressure levels are “gauge pressures”. Gauge pressure is equal to absolute pressure minus atmospheric pressure.

Cycle life

- Normal working life is 500,000 cycles according EN15714-3, where 1 cycle is 1 open stroke and 1 close stroke.

Finish

- Body: Chromated and polyurethane powder coated
- End caps: Chromated and polyurethane powder coated
- Pistons: Chromated
- Pinion: Hard Anodized
- Fasteners: Stainless steel or Deltatone® coated

Lubrication

- Castrol High Temperature grease (or equivalent)

Temperature Range

- Standard: -4°F to 176°F (-20°C to +80°C)
- Option:
 - Low temperature: -40°F to 176°F (-40°C to +80°C)
 - High temperature: +14°F to 250°F (-10°C to +120°C)

Angle of Rotation

- Factory set at 90°

- Adjustable range:
 - Size 40 to 600: -5° to +10° and +80° to 95°
 - Size 950 to 1600: -3° to +10° and +80° to 93°

Compliance to International Standards

- Valve flange: ISO 5211/DIN3337
- Solenoid flange: VDE/VDI 3845 (NAMUR)
- Accessory flange: VDE/VDI 3845 (NAMUR)
- European Directives: ATEX, PED and Machinery Directive
- This product is only intended for use in large-scale fixed installations excluded from the scope of Directive 2011/65/EU on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS 2).
- EAC Customs union: Compliance to Russian TR010 and TR012

Control Modules

The following versions of Control modules are available. Please check the indicated Data Sheet for more detailed information.

- QC41 24VDC 1.604.10
- QC42 115VAC 1.604.10
- QC43 230VAC 1.604.10
- QC40 AS-Interface 1.604.11
- QC54 Foundation Fieldbus 1.604.12

Options

Speed control, Manual control, IECEx, ATEX, FM INMETRO or CSA approvals, glands, quick connectors, exhaust port filters and silencers.

Functions

- Double or Single-Acting (Spring-Return)
- Fail-in-Last position

Actuator range

- Suitable for Q40 to Q1600 (see Note below).

Ingress protection rating

- IP66 / NEMA4X

Pneumatic connections

- G1/4" or 1/4" NPT

“Breather” function

- Standard for Single-Acting actuators

Actuator Weight

Actuator Model	Double-Acting		Spring-Return Springset N=6	
	lbs	Kg	lbs	Kg
Q 40	4.6	2.1	5.1	2.3
Q 65	6.2	2.8	7.3	3.3

Notes:

1. For Double-Acting and Spring-Return. Pistons at 90° outward position
2. Only For Double-Acting. Pistons at 0° inward position
3. Stroke is 90°

Central air chamber volume
Double-Acting and Spring-Return

End cap air chamber volume
Double-Acting only

Construction, Parts and Materials Q40 - Q600

Notes:

1. Included in Service Kit.
2. Anodized and polyurethane powder coated.
3. Chromated
4. Hard anodized
5. Electrophoretic coated
6. Deltatone® coated
7. Anodized
8. High end caps for Double-Acting and Spring-Return models up to size F100. Low end caps for Double-Acting models for sizes Q150 and larger.

Notes:

- Emerson recommends that the valve manufacturer supply the maximum required torque values (Including any adjustments or suggested safety factors for valve service conditions or application).
- Additionally, the valve manufacturer must identify at which position(s) and direction(s) of rotation (Counterclockwise or Clockwise) these maximum requirements occur.
- If in doubt, or you require any assistance with sizing actuators, do not hesitate to contact your nearest Emerson representative.

Notes:

- Emerson recommends that the valve manufacturer supply the maximum required torque values (Including any adjustments or suggested safety factors for valve service conditions or application).
- Additionally, the valve manufacturer must identify at which position(s) and direction(s) of rotation (Counterclockwise or Clockwise) these maximum requirements occur.
- If in doubt, or you require any assistance with sizing actuators, do not hesitate to contact your nearest Emerson representative.

Notes:

1. Emerson recommends that the valve manufacturer supply the maximum required torque values (Including any adjustments or suggested safety factors for valve service conditions or application).
2. Additionally, the valve manufacturer must identify at which position(s) and direction(s) of rotation (Counterclockwise or Clockwise) these maximum requirements occur.
3. If in doubt, or you require any assistance with sizing actuators, do not hesitate to contact your nearest Emerson representative.

Double-Acting Torque Diagram

Actuator Torque - Double-Acting (lbf.in)

Actuator Size	Torque in lbf.in												
	Supply pressure (psig)												
	30	35	40	45	50	55	60	70	75	80	90	100	120

Notes:

1. Emerson recommends that the valve manufacturer supply the maximum required torque values (Including any adjustments or suggested safety factors for valve service conditions or application).
2. Additionally, the valve manufacturer must identify at which position(s) and direction(s) of rotation (Counterclockwise or Clockwise) these maximum requirements occur.
3. If in doubt, or you require any assistance with sizing actuators, do not hesitate to contact your nearest Emerson representative.

Figure 1. Double-Acting Torque Diagram

Sizing of Rack & Pinion Actuators

Sizing is the selection procedure to select the right size of actuator on a valve with a given torque characteristic. This Data Sheet gives brief samples on how to size actuators and which data is needed.

Torque Characteristics of Valves

FieldQ actuators are commonly used to operate butterfly-, ball- and plug valves. The below instructions are intended for these valve applications, but can also be used for other quarter turn applications.

Generic torque characteristic of a valve

Valve Torque Values and Safety Factors

Emerson recommends that the valve manufacturer supplies the maximum required and allowed torque values (Including any adjustments or suggested safety factors for valve service conditions or application).

Additionally, the valve manufacturer must identify at which position(s) and direction(s) of rotation (Counterclockwise or Clockwise) these maximum requirements occur.

If in doubt or if you require any assistance with sizing actuators, do not hesitate to contact your nearest Emerson representative.

Sizing Double-Acting Actuators

Figure 2. Double-Acting torque characteristic

Sample Calculation of Double-Acting Sizing

- Publish valve break torque: 40 Nm 354 lbf.in
- Publish maximum stem torque: 105 Nm 929 lbf.in
- Recommended safety factor: 1.2 (20%)
- Minimum supply pressure: 5.5 bar 80 psi
- Maximum supply pressure: 6.5 bar 94 psi

Calculation:

1. Because the recommended safety factor is 1.2, the sizing torque will be $40 \times 1.2 = 48 \text{ Nm}$ ($354 \times 1.2 = 425 \text{ lbf.in}$).
2. Lookup in the Double-Acting Torque Table, in the 5.5 bar column (or 80 psi column), from top down, the first actuator size that generates more than 48 Nm (or 425 lbf.in).
3. Size QD65 is the first actuator that supplies more than
 - a. 48 Nm (71 Nm) at 5.5 bar.
 - b. 425 lbf.in (630 lbf.in) at 80 psi.
4. The maximum torque output of a QD65 is 84 Nm (743 lbf.in). This is lower than the maximum stem torque of 105 Nm.

Conclusion

Because QD65 supplies more torque than the sizing torque (see Point 3) and less than the maximum stem torque (see Point 4), size QD65 is suitable to operate this valve.

Sizing Spring-Return Actuators

Figure 3. Spring-to-Close Configuration

Table 1. For Fail-to Close actuators applies:

Actuator stroke:	Valve Stroke:
Air-Start torque	> Break torque and
Air-End torque	> Run open torque and
Spring-Start torque	> Run open torque and
Spring-End torque	> Re-seat torque

For Fail-to Open actuators applies:

Actuator stroke:	Valve Stroke:
Spring-Start torque	> Break torque and
Spring-End torque	> Run torque and
Air-Start torque	> Run torque and
Air-End torque	> Re-seat torque

Sample calculation Spring-Return sizing for a Spring-to-Close application

- Published valve torques
 - Break torque: 150 Nm 1328 lbf.in
 - Run torque opening: 45 Nm 398 lbf.in
 - Run torque closing: 45 Nm 398 lbf.in
 - Re-seating torque: 90 Nm 797 lbf.in
- Publish maximum stem torque: 375 Nm 3496 lbf.in
- Recommended safety factor: 1.5 (50%)
- Minimum supply pressure: 5.5 bar 80 psi
- Maximum supply pressure: 6.0 bar 87 psi

Calculation:

- Because the recommended safety factor is 1.5, the sizing torques will be:
 - Break 150 Nm x 1.5 = 225 Nm 1991 lbf.in
 - Run open 45 Nm x 1.5 = 67.5 Nm 597 lbf.in
 - Run close 45 Nm x 1.5 = 67.5 Nm 597 lbf.in
 - Re-seat 90 Nm x 1.5 = 135 Nm 1195 lbf.in
- Lookup in the Spring-Return Torque Table, in the "spring end" torque column, from top down, the first actuator size that generates more than 135 Nm (or 1195 lbf.in) of re-seat torque.
- Size QS350 with spring set 40 is the first actuator that supplies more spring end torque (149 Nm or 1655 lbf.in).
- Check now for the other three positions whether the actuator torque exceeds the valve torques.

Actuator stroke:	Valve Stroke:
Air-Start: 252 Nm	> Break open: 225 Nm
Air-End: 157 Nm	> Run open: 67.5 Nm
Spring-Start: 232 Nm	> Run close: 67.5 Nm
Spring-End: 149 Nm	> Re-seat: 135 Nm

- The maximum torque output of a QS350 with springset 40 at maximum pressure of 6 bar is 291 Nm (2575 lbf.in). This is lower than the maximum stem torque of 375 Nm (3496 lbf.in).

Conclusion

Because QS350 n=40 supplies more torque than the sizing torque (see Point 3) and less than the maximum stem torque (see Point 5), size QS350 n=40 is suitable to operate this valve.

Notes:

- If the first found actuator does not exceed the valve torque at all the positions, check the next size actuator.
- If the next size actuator does exceed the valve torque at all the positions, but fails at maximum stem torque check whether the same actuator but with a higher spring set (i.e. 50 instead of 40) does meet this requirement.

Spring (Cartridge) Placement

FieldQ Spring-Return actuators are supplied with springs on each side of the actuator.

Throughout the FieldQ size range, there are two different spring designs:

- Sizes Q40 to Q600 have 6 springs on each side (see Figure 1).
- Sizes F950 and Q1600 have 3 springs on each side (see Figure 2).

Check below Figures to see where to place the spring cartridges in case of spring set conversion.

When replacing spring cartridges in a Spring-Return actuator, ensure that the cartridges are replaced in their identical position from where they were removed.

Before assembling the spring cartridges and end caps, make sure that the pistons are completely inwards.

Figure 1. Spring placement sizes 40 to 600

A = Piston top view
B = Position of piston gear rack

Figure 2. Spring placement sizes 950 to 1600

A = Piston top view

Visual Indicator FieldQ Actuators

Description

FieldQ actuators have a large visual position indicator which allows clear indication of the valve's position at almost any position.

The FieldQ actuator's indicator is designed for position indication of actuators mounted "in line" with the pipe line and mounted "cross line" with the pipe line.

Conversion is easily done by turning the indicator 90° and reassemble back in place. Default, the position indicator will be mounted "in line".

Specifications

Materials

- Indicator knob: ABS, Black
- Indicator arrow: ABS, White
- Indicator screw: SS Head cap screw M6x12

Center Piece of Large Indicator

The large indicator, for sizes 600 - 1600, is designed with a press fitting onto the pinion top. This way, the indicator will stay also on the pinion top without the indicator screw fitted. This press fitting feature together with the option to punch out the center piece of the vane of the large indicator, offers a passageway for a switch box or positioner shaft, up to a diameter of 20 mm (0.787").

Ø 20 mm (0.787")

Punched out center piece

Size 40 - 600

Size 950 - 1600

Indicator Mounting "In-line"

Indicator Mounting "Across Line"

Drive Inserts

Key Features

- Drive inserts allow actuators to be directly mounted to valves.
- Eliminates the need for a bracket and coupling type mounting kit.
- The use of drive inserts significantly cuts the cost of the valve/actuator assembly.
- Standard actuators are fitted with square drive inserts.
- Special inserts may have oversized or undersized squares, double-D and shaft key way forms.

Description

The FieldQ actuators are fitted with drive inserts. These drive inserts allow actuators to be directly mounted onto suitable valves in accordance with ISO 5211 and eliminates the need for a bracket and coupling type mounting kit. The use of direct mounts significantly cuts the cost of the valve/actuator assembly.

Standard actuators are fitted with square drive inserts in accordance with ISO 5211. The ISO 5211 standard covers parallel and diagonal oriented inner squares (as per old DIN3337 standard).

Additionally, a wide variety of other inserts are also available. Special inserts may have oversized or undersized squares, double-D and shaft key way forms.

Drive inserts can be supplied on factory-built actuators or as loose items and are easily replaceable at distributor or end user level.

Where direct mounts are not possible, for instance on valves with exposed gland packing, the use of inserts often simplifies the design of the mounting kit.

- Material: Aluminium alloy
- Finish : Anodized

Notes:

1. Actuator size F12 does not have inserts. This actuator size has the inner square directly in the bottom of the pinion.
2. Actuator size F4000 does not have inserts. This actuator size has two inner squares (diagonally and parallel oriented) directly in the bottom of the pinion.
3. Page 2 and 3 shows an overview of the default insert sizes and the most common square shaped insert sizes. Please contact your local FieldQ representative for all available insert sizes.

mounting

Center Plate / Center Ring

Key Features

- Durable design allows good alignment of actuator and valve.
- Prevents wear on valve spindle or mounting kit due to misalignment.
- Center plates can easily be added to standard actuator.
- Most actuators are available with two center plates for flexible valve mounting.
- Equipped with slot to release pressure, trapped between valve and actuator.

Description

FieldQ actuators can be equipped with a center plate which takes care that actuator and valve (or valve mounting kit) are aligned when mounted. For most of the actuator sizes two centering plates are available.

Specifications

- Material plate: Nylon PA6, Black
- Material ring: Stainless Steel (Size 4000 only)

NAMUR Adaptation Plate

Description

The top flange of the FieldQ actuator is standard equipped with a NAMUR drilling pattern. The addition of a NAMUR adaptation plate makes the FieldQ actuator suitable for mounting all kinds of NAMUR compatible control and feedback accessories like solenoids, switch boxes or positioners.

Where the FieldQ is meant to be an integrated concept for valve automation, there are a number of reasons for also having NAMUR interfaces:

- Emergency repairs
 - When the Control Module requires immediate repair and the process can only be stopped for a limited time, it would be easy to mount standard available NAMUR accessories.
- Future updates
 - When a plant is not yet ready for digital (bus) communication, but will be upgraded in the (near) future towards this technology, it is easy to change from NAMUR accessories to a FieldQ with bus communication.
- Available equipment
 - NAMUR compatible accessories are easy to acquire. Many suppliers offer accessories that can be fitted to NAMUR actuator interfaces.

Construction

The NAMUR adaptation plate (1) comes with fasteners (2) and seals (3) and is fitted in front of the Q-Series actuator.

Specifications

Material:	Aluminum
Air connection:	1/4" BSP or 1/4" NPT
Finish:	Anodized with a polyester non-TGIC based powder coating.
Fasteners:	Stainless Steel
Seals:	Nitrile Rubber O-rings

Dimensions

For further dimensional information of the complete actuator, see Data Sheets:

- Metric units ISO5211: FQM.04.01.EN
- Imperial units: FQI.04.01.EN
- Metric units DIN3337: FQI.04.01.EN

Optional Temperature Ranges

Special selected O-ring seals and grease makes it possible to utilize the FieldQ actuator, with NAMUR plate, for various temperature ranges. Three temperature ranges are available, see Table below.

Notes:

FieldQ actuators fitted with Control Modules are not available for high temperature or low temperature applications.

Temperature range:		Option code:	Seals material:	Grease:
Standard temperature:	-20°C to +80°C / -4°F to +176°F	S	Nitrile rubber	- Castrol High Temperature - Rocol Sapphire Premier - Castrol Spheerol EPL 2 - Total Ceran XM 220"
High temperature:	-10°C to +120°C / +14°F to +250°F	H	Fluoro rubber (FPM) Viton®	
Low Temperature:	-40°C to +80°C / -40°F to +176°F	L	Silicone MVQ 70	- SKF – LGLT 2 - FUCHS – Renolit Unitemp 2 - Castrol Optitemp LG2

Fast Cycling FieldQ Actuators

Increase the Cycle Speed of Spring-Return Actuators

Key Features

- Increase cycle speed without special drilling on actuator house.
- Easy to mount to the actuator.
- Fits on all actuators with solenoid interface according VDI/VDE 3845 (NAMUR).

Description

The High Flow Plate is a simple means to increase the cycle speed (reduce the cycle time) on Single-Acting (Spring-Return) Pneumatic Actuators.

Cycle Speed

In general, Pneumatic Rack and Pinion Actuators are equipped with large internal air porting that allows adequate cycling under normal circumstances.

On the other hand, the 1/4" solenoid valves or pneumatic fitting materials, limit the maximum speed potential of the actuator due to the orifice diameter. Under normal operation conditions, the achieved cycle speed is sufficient.

If faster cycle times are required (<0.5 or <1 seconds) 1/4" solenoid valves or pneumatic fitting material can become a problem. These components will, in this case, function as a throttle, reducing the potential maximum air flow and as such the maximum cycle speed.

The High Flow Plate solves this problem. High Flow plates are fitted with 1/2" air connections to allow the fitting of larger solenoid valves and pneumatic fitting material.

Construction

The High Flow Plate (1) is an aluminum plate which can be mounted directly to FieldQ actuator's NAMUR adaptation plate (2). The plate is supplied with fasteners (3) and seals (4). The customer side of the plate is equipped with 1/2" NPT or G1/2" air connections for piped solenoid control.

Notes:

1. The High Flow Plate on its own does not make the cycle time of an actuator quicker. Take care that there is sufficient air supply capacity at actuator:
 - Air supply capacity must be larger than the Cv or Kv value of the control solenoid valve.
 - Use tubing with sufficient large diameter.
 - Make tubing from the main air supply to the actuator as short as possible.
2. Consider the use of Quick Exhaust valves in combination with these High Flow Plates.

3. In general, the actuators life cycle is reduced when cycling very fast.
 - For valves that cycle not that often, the total life cycle will still be sufficient.
 - For applications with increased cycle speed, that do cycle often, external limit stops (bottom stop plate) are recommended, especially on the larger size actuators.

Please consult your nearest FieldQ representative for more detailed information.

High Flow Block

Specifications

Materials

Block: Aluminium alloy,
black anodized (10 - 15 µm)
Fasteners: Stainless steel
O-ring seals: MVQ Rubber (Silicone)
Temperature range: -40 °C to +120 °C / -40 °F to +248 °F
